I consider antigen retrieval using CellMarque's Trilogy buffer to be an important component in the trial procedure used in my lab for testing new antibodies. In many instances it can either improve staining characteristics or succeed where other retrieval buffers have given only marginal staining.

Dear Cell Marque:

We have been using Declere and a pressure cooker in our laboratory for several months. I must admit, I was skeptical to try a different product when our use of citra and pepsin and protease worked fairly well. I guess I thought if it "ain't broke, don't fix it." Michele Foshee and Paul Ardi brought a pressure cooker and Declere for us to try, and we are hooked. The product works "as advertised" and has streamlined our immuno-peroxidase runs, not to mention the pathologists approve.

Michele and Paul have been very helpful and answer any questions I have in a very timely manner. Thanks, Cell Marque!

Sincerely,

Judy M. Klinger (HT) ASCP

DECLERE

The Sudbury Regional Hospital has been using DECLERE for over 3 years now. Declere, a 3 in 1 solution, deparaffinizes, rehydrates and un.masks all at once. This wonderful product enables full standardization of the pretreatment procedure; the numerous different Immunohistochemistry (IHC) procedures are condensed into a single, fully standardized protocol. This results in less errors, better staff efficiency and most importantly rendering reproducible and reliable results. This product makes positive difference to our laboratory.

Hi Jeff,

Sorry I haven't gotten around to writing this sooner. I hope it will be helpful to you.

At our lab we use the Ventana Nexes IHC module. We have 60 primary antibodies. Since we have used Declere routinely we have observed a dramatic increase in staining intensity, with no increased back round staining. In particular, the staining of our breast profiles exhibit a clear, intense, and consistent stain. I can recommend the use of Declere with any of the primary antibodies we use.

Dear Jeff,

At PCA Southeast our IHC lab performs over 70 antibodies. Of these antibodies 39 require antigen retrieval, 25 of which are retrieved in Cell Marque's Declere. Declere consistently yields rich, intense specific, but always clean IHC chemical reactions. I can always recommend that when determining IHC protocols that Declere should be among the first retrieval solutions to try.

Sincerely,

Roderic Bryson HT(ASCP)

Dear Jeff,

Our lab has recently standardized our antigen retrieval method using Cell Marque's Declere and Trilogy. I must say that this is the best product on the market for antigen retrieval. Our Immuno staining is very crisp and clear. Most of our staining intensity ratings are 4 or 4(+).

Thank you Cell Marque for this wonderful product. It has made our technical lives much easier.

Memo

Dear Paul Ardi,

I wanted to let you know how impressed I am with your product Trilogy. I used it with many different antibodies, but I got the best results with my CD23 antibody. The product I was using before for antigen retrieval seemed to be rather harsh on the tissue, while Trilogy seemed to be very gentle, with good staining results.

Sincerely,
Ruth Garnhart HT, (ASCP)
